# Chapter 1

## Namespace Index

### 1.1 Packages

Here are the packages with brief descriptions (if available):

<a href="#">GUINodeEditor</a> . . . . .	7
---	---

## Chapter 2

# Hierarchical Index

### 2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Bezier . . . . .	9
GUINodeEditor.BezierConfig . . . . .	9
GUINodeEditor.Dock . . . . .	9
GUINodeEditor.DockInput . . . . .	10
GUINodeEditor.DockOutput . . . . .	10
DrawGridOnScreen . . . . .	11
Drawing . . . . .	12
DrawTextureOnScreen . . . . .	12
ISerializationCallbackReceiver	
GUINodeEditor.TypeHolder . . . . .	21
MonoBehaviour	
GUINodeEditor.NodeEditor . . . . .	13
GUINodeEditor.RuntimeNodeEditor . . . . .	20
GUINodeEditor.Node . . . . .	12
GUINodeEditor.NodeEditorConfig . . . . .	15
GUINodeEditor.NodeEditorMinimap . . . . .	16
GUINodeEditor.NodeEditorWindow . . . . .	17
GUINodeEditor.DockWindow . . . . .	11
GUINodeEditor.NodeWindow . . . . .	18
GUINodeEditor.NodeWindow_Menu . . . . .	18
GUINodeEditor.NodeLogic . . . . .	17
GUINodeEditor.NumberField . . . . .	18
GUINodeEditor.PopAnywhereStack . . . . .	19
Popup . . . . .	19
SaveLoadGUI . . . . .	20
Serialization . . . . .	21
StringSerializationAPI . . . . .	21

## Chapter 3

# Class Index

### 3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

<a href="#">Bezier</a> . . . . .	9
<a href="#">GUINodeEditor.BezierConfig</a> . . . . .	9
<a href="#">GUINodeEditor.Dock</a> Holds node connection data. Its <a href="#">DockWindow</a> is the little box on node sides . . . . .	9
<a href="#">GUINodeEditor.DockInput</a> Helper for clarification of the docks side, as only output-input can be connected . . . . .	10
<a href="#">GUINodeEditor.DockOutput</a> Helper for clarification of the docks side, as only output-input can be connected . . . . .	10
<a href="#">GUINodeEditor.DockWindow</a> . . . . .	11
<a href="#">DrawGridOnScreen</a> . . . . .	11
<a href="#">Drawing</a> . . . . .	12
<a href="#">DrawTextureOnScreen</a> . . . . .	12
<a href="#">GUINodeEditor.Node</a> Holds node data, its <a href="#">NodeWindow</a> renders that data in the editor . . . . .	12
<a href="#">GUINodeEditor.NodeEditor</a> This is the node editor engine, it runs all the core logic of window manipulation. Inherits from MonoBehaviour, all editor configs are serialized here. . . . .	13
<a href="#">GUINodeEditor.NodeEditorConfig</a> . . . . .	15
<a href="#">GUINodeEditor.NodeEditorMinimap</a> . . . . .	16
<a href="#">GUINodeEditor.NodeEditorWindow</a> . . . . .	17
<a href="#">GUINodeEditor.NodeLogic</a> Non editor related serialization, this is what gets serialized to a text file . . . . .	17
<a href="#">GUINodeEditor.NodeWindow</a> . . . . .	18
<a href="#">GUINodeEditor.NodeWindow_Menu</a> . . . . .	18
<a href="#">GUINodeEditor.NumberField</a> . . . . .	18
<a href="#">GUINodeEditor.PopAnywhereStack</a> . . . . .	19
<a href="#">Popup</a> First drawn as a button, then you have to draw it externally to appear outside the buttons area rect. . . . .	19
<a href="#">GUINodeEditor.RuntimeNodeEditor</a> It will render the nodes on screen if attached to the gameObject that has <a href="#">NodeEditor</a> . . . . .	20
<a href="#">SaveLoadGUI</a> Save/Load GUI handler, set the fields externally . . . . .	20
<a href="#">Serialization</a> . . . . .	21
<a href="#">StringSerializationAPI</a> . . . . .	21
<a href="#">GUINodeEditor.TypeHolder</a> Serializes the type <code>Type</code> with <code>FullSerializer</code> because <code>Type</code> serialization does not work in Unity . . . . .	21

## Chapter 4

# Namespace Documentation

### 4.1 GUINodeEditor Namespace Reference

#### Classes

- class [BezierConfig](#)
- class [Dock](#)  
*Holds node connection data. Its [DockWindow](#) is the little box on node sides.*
- class [DockInput](#)  
*Helper for clarification of the docks side, as only output-input can be connected.*
- class [DockOutput](#)  
*Helper for clarification of the docks side, as only output-input can be connected.*
- class [DockWindow](#)
- class [Node](#)  
*Holds node data, its [NodeWindow](#) renders that data in the editor.*
- class [NodeEditor](#)  
*This is the node editor engine, it runs all the core logic of window manipulation. Inherits from MonoBehaviour, all editor configs are serialized here.*
- class [NodeEditorConfig](#)
- class [NodeEditorMinimap](#)
- class [NodeEditorWindow](#)
- class [NodeLogic](#)  
*Non editor related serialization, this is what gets serialized to a text file.*
- class [NodeWindow](#)
- class [NodeWindow\\_Menu](#)
- class [NumberField](#)
- class [PopAnywhereStack](#)
- class [RuntimeNodeEditor](#)  
*It will render the nodes on screen if attached to the gameObject that has [NodeEditor](#).*
- class [TypeHolder](#)  
*Serializes the type `Type` with `FullSerializer` because `Type` serialization does not work in Unity.*

## Chapter 5

# Class Documentation

### 5.1 Bezier Class Reference

#### Static Public Member Functions

- static void [DrawBezier](#) (Vector2 start, Vector2 end, Color color, float opacity=1, float thickness=2, float precision=15)  
*Draws the bezier curve.*

### 5.2 GUINodeEditor.BezierConfig Class Reference

#### Public Attributes

- int [precision](#) = 10  
*how many lines should each curve have. More means smoother.*
- Color **normalColor** = Color.black
- Color [triggeredColor](#) = Color.green  
*color used when node.isTriggered is true.*
- Color **connectingColor** = Color.cyan

### 5.3 GUINodeEditor.Dock Class Reference

Holds node connection data. Its [DockWindow](#) is the little box on node sides.

Inherited by [GUINodeEditor.DockInput](#), and [GUINodeEditor.DockOutput](#).

#### Public Member Functions

- **Dock** (Node [node](#), Type type, string [name](#), object initial)

## Public Attributes

- [TypeHolder](#) `typeHolder`  
*Type for dock matching, only docks matched by type can be connected.*
- string `name`  
*Used as an identifier.*
- object `value`  
*Value a dock is carrying. It is defined by your editor logic, you can get and set it.*
- [Node](#) `node`  
*Parent node reference.*
- [DockWindow](#) `dockWindow`
- List< [Dock](#) > `targets`  
*The list of docks it is connected to. These targets are always connected back to this dock.*

### 5.3.1 Detailed Description

Holds node connection data. Its [DockWindow](#) is the little box on node sides.

## 5.4 [GUINodeEditor.DockInput](#) Class Reference

Helper for clarification of the docks side, as only output-input can be connected.

Inherits [GUINodeEditor.Dock](#).

## Public Member Functions

- **[DockInput](#)** ([Node](#) `node`, Type `type`, string `name`, object `initial`)

## Additional Inherited Members

### 5.4.1 Detailed Description

Helper for clarification of the docks side, as only output-input can be connected.

## 5.5 [GUINodeEditor.DockOutput](#) Class Reference

Helper for clarification of the docks side, as only output-input can be connected.

Inherits [GUINodeEditor.Dock](#).

## Public Member Functions

- **[DockOutput](#)** ([Node](#) `node`, Type `type`, string `name`, object `initial`)

## Additional Inherited Members

### 5.5.1 Detailed Description

Helper for clarification of the docks side, as only output-input can be connected.

## 5.6 `GUINodeEditor.DockWindow` Class Reference

Inherits [GUINodeEditor.NodeEditorWindow](#).

### Public Attributes

- [Dock](#) `dock`

## Additional Inherited Members

## 5.7 `DrawGridOnScreen` Class Reference

### Public Member Functions

- void `OnGUI ()`

### Public Attributes

- Texture2D `gridTexture`
- float `gridOpacity` = 1f
- float `gridUnit` = 25  
*Edge length of the grid square in pixels.*
- float `gridMultiplyFactor` = 20  
*For performance reasons (until I generate the bigger texture from script), bigger texture with grid tiled should be provided. This is the number of times the grid has fit in the bigger texture*
- Vector2 `panningOffset`  
*Offset of the whole editor area.*

### 5.7.1 Member Data Documentation

#### 5.7.1.1 `gridMultiplyFactor`

```
float DrawGridOnScreen.gridMultiplyFactor = 20
```

For performance reasons (until I generate the bigger texture from script), bigger texture with grid tiled should be provided. This is the number of times the grid has fit in the bigger texture

## 5.8 Drawing Class Reference

### Static Public Member Functions

- static Color [MultOpacity](#) (Color color, float opacity)  
*Multiply opacity.*
- static Rect **GetRightRectFromPoints** (Vector2 a, Vector2 b)

## 5.9 DrawTextureOnScreen Class Reference

### Public Member Functions

- void **OnGUI** ()

### Public Attributes

- Texture2D **backgroundTexture**
- float **backgroundOpacity** = 1

## 5.10 GUINodeEditor.Node Class Reference

Holds node data, its [NodeWindow](#) renders that data in the editor.

### Public Member Functions

- virtual void [Update](#) ()  
*Called externally from [NodeLogic.Update](#). Place your logic here.*
- virtual void **Init** (Vector2 position=default(Vector2))
- virtual void **Init** (Vector2 position, [NodeWindow](#) nodeWindow, string title="")  
*Init with the specified position (usually position of the menuNode.rect), nodeWindow, parent node and title.*
- T **GetFirstTargetValue**< T > ([Dock](#) dock, object returnIfNull=default(object))
- [DockInput](#) **AddInput** (Type type, string name="", object initial=null, int insertAtIndex=-1)
- [DockOutput](#) **AddOutput** (Type type, string name="", object initial=null, int insertAtIndex=-1)
- int **GetValidIndex** (int count, int index)
- object **CreateInstance** (Type type)
- [DockInput](#) **GetDockInputByName** (string name)
- [DockOutput](#) **GetDockOutputByName** (string name)

### Public Attributes

- bool [isTriggered](#)  
*If this is true, the connection will be drawn with bezierConfig.triggeredColor.*
- List< [DockInput](#) > [inputs](#)  
*List of left side docks.*
- List< [DockOutput](#) > [outputs](#)  
*List of right side docks.*
- [NodeWindow](#) [nodeWindow](#)  
*Renders the node data in override OnGUI.*

### 5.10.1 Detailed Description

Holds node data, its [NodeWindow](#) renders that data in the editor.

### 5.10.2 Member Function Documentation

#### 5.10.2.1 Init()

```
virtual void GUINodeEditor.Node.Init (
    Vector2 position,
    NodeWindow nodeWindow,
    string title = "" ) [virtual]
```

Init with the specified position (usually position of the menuNode.rect), nodeWindow, parent node and title.

#### Parameters

<i>position</i>	Position.
<i>nodeWindow</i>	<a href="#">Node</a> window.
<i>node</i>	Parent node.
<i>title</i>	Title.

## 5.11 GUINodeEditor.NodeEditor Class Reference

This is the node editor engine, it runs all the core logic of window manipulation. Inherits from MonoBehaviour, all editor configs are serialized here.

Inherits MonoBehaviour.

### Public Member Functions

- void [Update](#) ()  
*Calls nodeLogic.Update.*
- void [DrawNodeWindows](#) ()  
*OnGUI of the editor, handles drawing of windows and all the functionality.*
- bool [ShouldRepaint](#) ()  
*For UnityEditor, if Repaint should be called, to prevent low fps.*
- void [DrawDebug](#) ()  
*Draws debug with some useful editor states.*
- void **DrawBackground** ()
- void **DrawGrid** ()
- void **DrawMinimap** ()
- void [MoveConnection](#) ([DockOutput](#) moveTargetDock, [DockInput](#) fromDock, [DockInput](#) toDock)  
*Moves the connection from one dock to another.*
- void **MoveConnection** ([DockInput](#) moveTargetDock, [DockOutput](#) fromDock, [DockOutput](#) toDock)
- void [DisconnectDocks](#) ([Dock](#) a, [Dock](#) b)  
*Disconnects the docks, removes each other from their targets.*

- bool **IsAllowedConnectionBetweenDocks** (Dock startDock, Dock endDock)  
*Returns if the two docks are of the matching type and not from the same parent node.*
- void **ConnectDocks** (DockOutput output, DockInput input)
- void **ConnectDocks** (DockInput input, DockOutput output)
- void **ClickSelect** (NodeWindow nw)  
*If <Shift> is held toggles selection, else deselects all and selects just it.*
- void **UnselectWindow** (NodeWindow nw)
- void **SelectWindow** (NodeWindow nw)
- T **CreateNewWindow< T >** (Vector2 position=default(Vector2), bool isMenu=false)  
*Call this from the menu node without parameters, it will get menu position.*
- void **DrawNodeConnections** (Node n, Vector2 positionOffset=default(Vector2), float scale=1, bool isMinimap=false)  
*Also used in minimap.*
- void **DeselectAll** ()  
*Clears selectedWindows list.*
- bool **IsNodeSelected** (Node node)
- void **DeleteSelected** ()  
*Triggered on <Del>.*
- string **GetSaveLoadPath** (string fileName)  
*Gets Resources folder path with fileName.*
- void **Save** (string fileName="")  
*Saves the file with given fileName to save/load path in Resources folder. Overwrites if file with the same name exists (you have to check that separately). Sets the lastSaveLoadPath.*
- void **Load** (string fileName="")  
*Loads the file with given fileName from save/load path in Resources folder. If no file is found, creates a new save file with that name. Sets the lastSaveLoadPath.*

## Static Public Member Functions

- static NodeEditor **GetOrCreateNodeEditor** (string nodeEditorName, Type menuType=default(Type))

## Public Attributes

- NodeEditorConfig **config** = new NodeEditorConfig ()
- string **saveLoadName** = "defaultSave"  
*Currently loaded file name. Has to be set externally like from SaveLoadGUI.*
- string **saveLoadResourcesFolderName** = ""  
*Name of the folder where save/load files are kept (Resources folder exists in builds).*
- string **lastSaveLoadPath** = ""  
*last path that was either saved or loaded. This will be used to load after deserialize.*
- TypeHolder **menuTypeHolder** = new TypeHolder ()  
*Menu type, to specify which menu node will be used for this editor.*
- NodeLogic **nodeLogic** = new NodeLogic ()  
*Holds nodeEditor data like nodes, serialized with FullSerializer for polymorphism support.*
- List< NodeWindow > **selectedWindows** = new List<NodeWindow> ()
- NodeWindow **hoveredWindow**
- bool **isDragging**
- Vector2 **startDraggingPosition**
- NodeWindow **mainDraggedWindow**
- bool **isPanning**
- Vector2 **oldPanningOffset**

- Vector2 **startPanningPosition**
- bool **isPrePanning**
- Vector2 **prePanningPosition**
- bool **isSelecting**
- Vector2 **startSelectPosition**
- Vector2 **startSelectPanningOffset**
- bool **isConnecting**
- Dock **startConnectDock**
- bool **shouldEndConnecting**
- bool **isDisconnecting**
- Dock **startDisconnectDock**
- Dock **endDisconnectDock**
- NodeWindow **renamingWindow**
- string **renamingName**
- Node **nodeMenu**
- bool **shouldSpawnMenu**
- Dictionary< NodeWindow, bool > **windowVisibilities** = new Dictionary<NodeWindow, bool> ()

### 5.11.1 Detailed Description

This is the node editor engine, it runs all the core logic of window manipulation. Inherits from MonoBehaviour, all editor configs are serialized here.

### 5.11.2 Member Function Documentation

#### 5.11.2.1 Load()

```
void GUINodeEditor.NodeEditor.Load (
    string fileName = "" )
```

Loads the file with given fileName from save/load path in Resources folder. If no file is found, creates a new save file with that name. Sets the lastSaveLoadPath.

#### 5.11.2.2 Save()

```
void GUINodeEditor.NodeEditor.Save (
    string fileName = "" )
```

Saves the file with given fileName to save/load path in Resources folder. Overwrites if file with the same name exists (you have to check that separately). Sets the lastSaveLoadPath.

## 5.12 GUINodeEditor.NodeEditorConfig Class Reference

### Public Member Functions

- Vector2 **GetWindowOverflow** ()

*To be able to draw docks outside the the node window, another rect is wrapped around it that draws both node window and docks. This is for how much the docks overflow that inner node window.*

## Public Attributes

- bool `runUpdateInEditMode` = true  
*> Update is not called out of play mode. If true, nodeEditor will call nodeLogic.Update that calls Update for each node.*
- `UISkin` `guiSkin`  
*Standard Unity UISkin that changes the appearance of GUI elements.*
- bool `drawMinimap` = true  
*Minimap is drawn while panning or moving.*
- `NodeEditorMinimap` `nodeEditorMinimap` = new `NodeEditorMinimap` ()
- `DrawTextureOnScreen` `drawTextureOnScreen` = new `DrawTextureOnScreen` ()
- bool `snapToGrid` = true  
*Node window position is snapped to grid when dragging ends.*
- `DrawGridOnScreen` `drawGridOnScreen` = new `DrawGridOnScreen` ()
- `Rect` `dockRect` = new `Rect` (0, 5, 14, 10)  
*If using a custom dock Texture, adjust this to get pixel perfect placement.*
- `Texture2D` `dockTexture`
- `Vector2` `tooltipOffset` = new `Vector2` (10, 10)  
*Offset of the tooltip from mousePosition.*
- bool `drawDockTypeTooltip` = true  
*If tooltip with dock type should be drawn.*
- `BezierConfig` `bezierConfig` = new `BezierConfig` ()

## 5.12.1 Member Function Documentation

### 5.12.1.1 GetWindowOverflow()

```
Vector2 GUINodeEditor.NodeEditorConfig.GetWindowOverflow ( )
```

To be able to draw docks outside the the node window, another rect is wrapped around it that draws both node window and docks. This is for how much the docks overflow that inner node window.

## 5.12.2 Member Data Documentation

### 5.12.2.1 runUpdateInEditMode

```
bool GUINodeEditor.NodeEditorConfig.runUpdateInEditMode = true
```

> Update is not called out of play mode. If true, nodeEditor will call nodeLogic.Update that calls Update for each node.

## 5.13 GUINodeEditor.NodeEditorMinimap Class Reference

### Public Member Functions

- void `DrawMinimap` ()

### Public Attributes

- List< [Node](#) > **nodes**
- float **opacity** = 0.6f
- Vector2 **panningOffset**
- Vector2 **dockRectSize**
- Rect **rect**
- bool **drawScreenRect** = true
- float **screenRectOpacity** = 0.4f
- float **scale** = 0.35f

## 5.14 `GUINodeEditor.NodeEditorWindow` Class Reference

Inherited by [GUINodeEditor.DockWindow](#), and [GUINodeEditor.NodeWindow](#).

### Public Member Functions

- virtual void **OnGUI** ()

### Public Attributes

- Rect **rect** = new Rect ()
- Color **backgroundColor**
- string **title** = ""
- [NodeEditor](#) **nodeEditor**
- Vector2 **dragStartOffset**

## 5.15 `GUINodeEditor.NodeLogic` Class Reference

Non editor related serialization, this is what gets serialized to a text file.

### Public Member Functions

- void [Update](#) ()  
*Calls Update of each node.*

### Public Attributes

- List< [Node](#) > **nodes** = new List<[Node](#)>()
- Vector2 **panningOffset** = Vector2.zero

### 5.15.1 Detailed Description

Non editor related serialization, this is what gets serialized to a text file.

## 5.16 GUINodeEditor.NodeWindow Class Reference

Inherits [GUINodeEditor.NodeEditorWindow](#).

Inherited by [GUINodeEditor.NodeWindow\\_Menu](#).

### Public Member Functions

- virtual float **GetWindowWidth** ()
- virtual float **GetWindowHeight** ()
- virtual void **SetWindowSize** (Vector2 size)
- Color **SetOpacity** (Color c, float opacity)
- void **DrawTooltip** (string tooltip)
- void **DrawDock** ([Dock](#) dock, bool isTitleRow=false)

### Public Attributes

- [Node](#) **node** = new [Node](#) ()
- [Popup](#) **popup** = new [Popup](#)()

### Properties

- Vector2 **cachedSize** [get, set]

## 5.17 GUINodeEditor.NodeWindow\_Menu Class Reference

Inherits [GUINodeEditor.NodeWindow](#).

### Public Attributes

- [NodeWindow](#) **clickedWindow**

### Additional Inherited Members

## 5.18 GUINodeEditor.NumberField Class Reference

### Public Member Functions

- int **Int** (int val)
- float **Float** (float val)

## 5.19 GUINodeEditor.PopAnywhereStack Class Reference

### Public Member Functions

- object **Head** (object toReturnIfNull)
- void **HandleInsertRemove** (object obj, bool active, object instance)

### Public Attributes

- List< object > **stack** = new List<object> ()

## 5.20 Popup Class Reference

First drawn as a button, then you have to draw it externally to appear outside the buttons area rect.

### Public Member Functions

- Rect **GetListRect** ()  
*Gets the popup list rect.*
- void **DrawList** ()  
*Draws GUI.SelectionGrid of 1 column.*
- Enum **EnumPopup** (Enum currentEnum)  
*Enum popup.*

### Public Attributes

- object **identifier**  
*If this is not null, popup is opened and should be drawn externally.*

### 5.20.1 Detailed Description

First drawn as a button, then you have to draw it externally to appear outside the buttons area rect.

```
// draw popup
if (p.identifier != null) {
    // get local rect
    Rect popupRect = p.GetListRect();

    // add position of your parent element
    popupRect.position += n.nodeWindow.rect.position;

    // draw a window because overlapping elements will consume click events
    GUI.Window (-1, popupRect, (id) => p.DrawList (), "", GUI.skin.box);

    // you might have to check for event on more places to close properly
    if (Event.current.type == EventType.mouseDown)
        p.identifier = null;
}
```

## 5.20.2 Member Function Documentation

### 5.20.2.1 GetListRect()

```
Rect Popup.GetListRect ( )
```

Gets the popup list rect.

#### Returns

The popup list rect.

## 5.21 GUINodeEditor.RuntimeNodeEditor Class Reference

It will render the nodes on screen if attached to the gameObject that has [NodeEditor](#).

Inherits MonoBehaviour.

### Public Attributes

- [NodeEditor](#) **nodeEditor**

### 5.21.1 Detailed Description

It will render the nodes on screen if attached to the gameObject that has [NodeEditor](#).

## 5.22 SaveLoadGUI Class Reference

Save/Load GUI handler, set the fields externally.

### Public Member Functions

- delegate void **OnSave** (string fileName)
- delegate void **OnLoad** (string fileName)
- void **OnGUI** ()

### Public Attributes

- List< string > [fileNames](#) = new List<string> ()  
*Displayed in the dropdown when \_isLoadingDialogue is set to true. When fileName is clicked, OnLoad is invoked with that fileName.*
- OnSave [onSave](#)  
*callback when Save button is pressed*
- OnSave [onLoad](#)  
*callback when Load button is pressed*
- Vector2 [scrollPosition](#) = Vector2.zero  
*scroll position of the area, if items exceed Screen.height*
- string [saveLoadName](#) = ""  
*String that the user can change.*
- string [currentName](#) = ""  
*Set this to the name that is currently loaded to highlight it.*

### 5.22.1 Detailed Description

Save/Load GUI handler, set the fields externally.

### 5.22.2 Member Data Documentation

#### 5.22.2.1 fileNames

```
List<string> SaveLoadGUI.fileNames = new List<string> ()
```

Displayed in the dropdown when `_isLoadingDialogue` is set to true. When `fileName` is clicked, `OnLoad` is invoked with that `fileName`.

## 5.23 Serialization Class Reference

### Static Public Member Functions

- static void **Save**< T > (string path, T obj)
- static T **Load**< T > (string resourcesLocalPath)  
*Returns a generic object that is serialized to a Resources folder path.*
- static string **GetFullResourcesPath** (string path)  
*Returns the Application.dataPath + Resources folder.*

## 5.24 StringSerializationAPI Class Reference

### Static Public Member Functions

- static string **Serialize** (Type type, object value)
- static object **Deserialize** (Type type, string serializedState)

## 5.25 GUINodeEditor.TypeHolder Class Reference

Serializes the type `Type` with `FullSerializer` because `Type` serialization does not work in Unity.

Inherits `ISerializationCallbackReceiver`.

### Public Member Functions

- void **OnBeforeSerialize** ()
- void **OnAfterDeserialize** ()

### Public Attributes

- string **serializedType**
- Type **type**

### 5.25.1 Detailed Description

Serializes the type `Type` with `FullSerializer` because `Type` serialization does not work in Unity.
